FIELD CROPS

1980 Field Crop Summary 20-21
Planting & Harvesting Periods 22
Percentage of Acres Planted & Harvested 23-24
Quantity Sold & Percent Marketed 25
Major Crop Yield Trends Graph 25
Selected Virginia Crop Records 26
Acreage, Yield, Prod., Disposition & Value:
  Corn, Wheat, Barley, Oats, Sorghum 27
  Rye, Soybeans, Cotton, Peanuts, Hay 28
  Tobacco by Types; Orchardgrass Seed 29
  Potatoes & Sweet Potatoes 30
Production, Stock & Price Graphs, Corn & Feed Grains 31
COUNTY ESTIMATES:
  Corn 32-39
  Corn Silage 40-47
  Winter Wheat 48-53
  Oats 54-61
  Barley 62-67
  Soybeans 68-73
  Peanuts 74
  Tobacco 75-80
Tobacco: Acreage, Yield, Production, Carry-over, Supply, Disappearance, Season Price & Support Operations 81
Grain & Hay: Production & Stocks 82-83
Fertilizer: Sales by Counties & Cities 84-85
Liming Materials Sold in Virginia 86-87
Tobacco: Sales by Markets 88
Acreage by Varieties:
  Flue-Cured Tobacco & Cropping Practices 89
  Barley, Peanuts & Wheat 90-91
  Soybeans & Cropping Practices 92

LIVESTOCK

1980 Livestock Summary 93
Livestock Inventory 94
Meat Animal Production & Income 95
Wool Production & Value 95
Commercial Slaughter & Red Meat Production 96
Cattle, Hogs & Sheep Graphs 97
COUNTY ESTIMATES:
  Cattle 98-99
  Milk Cows 100-101
  Hogs 102-103
  Sheep 104-105

DAIRY

1980 Dairy Summary 106
Milk, Production, Disposition & Income 107
Milk Cows & Milk Production 108
Milk Production Monthly & Annual Graphs 109
Production of Manufactured Products 110

POULTRY AND HONEY

1980 Poultry & Honey Summary 111
Chickens: Inventory & Value; Production, Disposition & Income; Broilers 111
Chicks Hatched; Eggs: Production by Months; Production, Disposition & Income 112
Turkeys: Inventory & Value; Production, Disposition & Income; Poults Hatched 113
Poultry & Eggs: Gross Income 113
Honey & Beeswax: Prod., Value & Honey Stocks 113

VEGETABLES

1980 Vegetable Summary 114
Planting & Harvesting Dates 115
Vegetable Calendar 115
Com'l. Vegetables: Fresh Market & Processing 116-117

FRUIT

1980 Fruit Summary; Apples & Peaches: Production, Disp., Season Average Price, Value & Utilization; Apple Varieties 118
County Estimates: Apples 119
Apple Trees: Data by Counties 120-122

FARM INCOME AND PRODUCTION EXPENSES

1980 Farm Income & Prod. Expenses Summary 123
Farm Prices, Prod. Expenses; Income, Gross & Net; Farm Real Estate Number, Size & Value 124
Cash Receipts & Gross Farm Income 125
Prices Received by Farmers 126-128
Index Numbers: Prices Received (1910-14=100) 129
Index Numbers: Prices Received (1967=100) 130
Feed: Price Ratios 131
Prices Paid: Selected Feed Items 132-133
Prices Paid: Production Items 134-135

MISCELLANEOUS

1980 Agricultural Labor Summary 136
Labor: Farm Employment & Wage Rates 136
Custom Work Rates Summary 137
Custom Work Rate Planning District Map 137
Custom Work Rates: Farming Operations 138-139

Checklist of Reports Published 151-152
Crop Reporting Districts Map 153
Farmers' Newsline & Newsletter 154

S. MASON CARBAUGH
COMMISSIONER

RAYMOND D. VAUGHAN
DEPUTY COMMISSIONER

COMMONWEALTH of VIRGINIA

DEPARTMENT OF AGRICULTURE AND CONSUMER SERVICES
P. O. Box 1163, Richmond, Virginia 23209

It is with great pleasure that I present this Virginia Agricultural Statistics Bulletin to all interested in agriculture in Virginia.

This publication is a summary of data compiled by the Virginia Crop Reporting Service under a cooperative agreement between the Virginia Department of Agriculture and Consumer Services and the U.S. Department of Agriculture.

As you are well aware, 1980 presented our farmers with very adverse economic conditions. Low farm commodity prices throughout the first half of the year combined with high farm production costs would have been problems enough. However, record high interest rates and an extremely severe drought further tested the capability of our farmers to respond to adversity.

The statistics in this annual summary serve as a record of achievements and losses experienced by farmers in the Commonwealth during 1980 and earlier years. Only through the availability of reliable information can accurate judgments and decisions be made by farmers and by those serving farmers.

I am grateful to the thousands of Virginians, both farm and agribusiness, for their voluntary cooperation in providing data to the Crop Reporting Service. I sincerely hope you will find this information to be helpful and interesting.

S. Mason Carbaugh

S. Mason Carbaugh
Commissioner

RANK: Principal Crops and Livestock, Virginia, 1980

Commodity	Rank Within State Based on						Rank With Other States Based on Production 1/		Virginia Production as Percent of U.S. Total 1/

1980 FIELD CROP SUMMARY

The value of the 14 field crops (including potatoes and sweet potatoes) showed the effects of the drought by dropping 7 percent to an estimated $559 million in 1980. This compares with the 1979 value of $598 million. Tobacco continues to hold the first place ranking based on value, $155.7 million, 2 percent higher than the blue-mold infected 1979 crop. The higher value is due to record high prices received for all types, which more than offset lower overall production. Burley was the only type with higher production in 1980. Corn for grain again held the second place ranking at $116.2 million although this represents a 20 percent drop from 1979. Even a record high price, $3.55 per bushel, wasn't enough to overcome the 36 percent drop in production. Despite a 9 percent drop in production, the value of all hay production, at $108.9 million, kept that crop in the number 3 position. The increased demand for hay, brought on by the drought, pushed the average price up to $67.00 per ton, second only to the record high $77.00 received in 1977, also a drought year. The fourth ranked Virginia crop was once again soybeans, although the value plummeted 24 percent below 1979. The record high $8.00 per bushel season average price couldn't offset the 40 percent drop in production. Wheat moved into the fifth spot by virtue of the largest production in 49 years, as it escaped the drought which started after the crop was "made." The value, which at $41.3 million was up 60 percent from 1979, also reflects the second highest price of record, at $3.90 per bushel, just 20 cents below the high set a year earlier. Peanuts slipped to sixth place, suffering the second consecutive year that production declined. The value of $33.1 million was down 37 percent from a year earlier. The record high price of 24.3 cents per pound was little consolation to growers who produced 46 percent fewer peanuts than in 1979. The remaining crops, ranked with respect to 1980 value of production and followed by percentage change from 1979 value, are listed as follows: (7) potatoes up 33 percent, thanks to a record high price of $8.60 per cwt.: (8) barley up 13 percent--a record high $2.30 per bushel more than offset a 12 percent drop in production; (9) sweet potatoes down 31 percent; (10) oats down 7 percent; (11) grain sorghum up 14 percent; (12) rye down 12 percent; (13) orchardgrass seed up 122 percent; (14) cotton lint and seed up 17 percent.

Corn producers in 1980, suffering through a severe drought, produced 32,725,000 bushels. This was 36 percent below 1979 production and the lowest since 1971. Yield, set at 55 bushels per acre, was 28 bushels lower than the 1979 yield and the same as 1977's drought-stricken crop. Corn acreage harvested for grain totaled 595,000 acres, compared with 615,000 acres in 1979. Corn silage production also decreased from 2,700,000 tons in 1979 to 2,530,000 tons in 1980, a 6 percent decline. Acreage harvested as silage reached 220,000 acres, while yield totaled 11.5 tons per acre. This compares with 180,000 acres and a 15 ton per acre average in 1979. Other than 1977's 9.5 tons per acre, the 1980 silage yield was the lowest since 1966.

Sorghum grain producers in 1980 produced 387,000 bushels, 21 percent below 1979 production. This was the combined result of lower 1980 acreage and yield; 9,000 acres were harvested in 1980 compared to 10,000 in 1979 and yielded 49 bushels per acre in 1979 compared with 43 bushels in 1980. Acreage harvested as silage reached 8,000 acres, 1,000 acres above 1979, but the same as 1978. Growers reported an average 10 tons per acre and produced 80,000 tons, compared to an 11 ton average and 77,000 tons in 1979. Production was up 4 percent, due primarily to the increase in harvested acreage.

Soybean production at 9,150,000 bushels, was 40 percent below 1979's record production. Growers harvested a record 610,000 acres, while yield at 15 bushels per acre was the lowest since the 14 bushel average in 1963.

Peanut production in 1980 totaled 136,350,000 pounds, down 46 percent from 1979 and 56 percent from 1978. This low production was the result of an extremely dry growing season. Growers produced 1,350 pounds per acre, the lowest yield since 1947's 1,220 pound average. Harvested acreage was 101,000 acres, the same as 1979.

Flue-cured tobacco growers produced 84,150,000 pounds in 1980, down 7 percent from 1979 and 19 percent from 1978. Dry and hot late-season weather caused lower yields (1,650 pounds per acre in 1980 to 1,735 pounds in 1979) and less acreage to be harvested (51,000 acres to 52,000 acres in 1979).

Fire-cured tobacco production totaled a record low 3,647,000 pounds in 1980, down 33 percent from 1979. The primary cause is the yearly decline in harvested acres; 3,900 acres harvested in 1980 was also a record low. Yield for 1980 averaged a drought-stricken 935 pounds per acre. This was 200 pounds less than the 1979 yield.

Burley tobacco 1980 yields recovered somewhat after the blue-mold disaster crop of 1979. Growers averaged 1,860 pounds per acre, 510 pounds above 1979, but still 455 pounds below 1978 yield. With 10,000 harvested acres estimated, production totaled 18,600,000 pounds. This was a 39 percent increase from 1979 production, but 22 percent below that of 1978.

Sun-cured tobacco harvested acreage continued to decline as growers harvested a record low 390 acres in 1980. Production for 1980 reached 394,000 pounds, also a record low. Growers raised an average of 1,010 pounds per acre, compared with 1,055 pounds in 1979.

Cotton growers harvested 300 acres in 1980, unchanged from 1979 harvested acreage. An average of 320 pounds were grown per acre for a production estimate of 200 bales. This was also unchanged as 1979 production was 200 bales.

All hay production totaled 1,626,000 tons in 1980, down 9 percent from 1979 tonnage and down less than 1 percent from 1978. Of the total, 218,000 tons were alfalfa hay which was down 20 percent from last year. The harvested acreage for all hay was 967,000 acres, down 1 percent from 1979 but 2 percent above 1978. Alfalfa acreage accounted for 87,000 acres of the total harvested acres for hay. Yield per acre for all hay was 1.68 tons per acre, down 8 percent from 1979. The yield for alfalfa hay was 2.50 tons per acre down 15 percent from a year earlier and 19 percent below 1978's record yield of 3.10 tons per acre.

Potato production estimated at 1,540,000 cwt. for the State was 41 percent below production in 1979. Harvested acreage in 1980 estimated at 14,000 was 5,200 acres less than the previous year. Average yield for the State at 110 cwt. per acre was 25 cwt. below the yield of 1979. Eastern Shore yield averaged 110 cwt. per acre from an estimated 12,900 acres harvested. Production for the Eastern Shore totaled an estimated 1,419,000 cwt., 41 percent less than in 1979. Other areas of the State produced 121,000 cwt., down 28 percent from the previous year.

Sweet potato production totaled an estimated 242,000 cwt. in 1980. This was 52 percent less than in 1979. Acreage harvested at 2,100 acres was 1,800 acres less than in 1979. Yield at 115 cwt. per acre was down 15 cwt. from 1979. Production on the Eastern Shore at 220,000 cwt. was down 54 percent from 1979. Eastern Shore producers harvested an estimated 1,900 acres in 1980 at an average yield of 116 cwt. per acre.

The 1980 growing season is best described as a severe drought year. However, the drought did not appear until early summer. Heavy snow accumulation during the first three months of 1980 protected small grains from extremely cold temperatures. Proverbial April showers delayed spring seedings for the third consecutive year with progress about a week behind average as of mid-month. Hail damaged a considerable acreage of small grains and vegetables in April in Eastern Piedmont localities. Dry, cool weather during the first half of May delayed germination of crops and compacted soils. Widespread rainfall after mid-May relieved the dry conditions but lowered quality of mowed hay caught by the showers. Open weather after Memorial Day speeded planting progress, but was the beginning of one of the severest droughts Virginia farmers have experienced. June precipitation totaled 2 to 4 inches below average. In July only western areas received normal rainfall when hail destroyed fruit orchards in Botetourt and Nelson counties. Dry weather in eastern localities prevented corn pollination. The drought spread westward during August with rainfall nearly 2 inches below the 30-year mean and temperatures reaching record highs during the first week. The southeastern peanut runner crop developed only in irrigated fields. Soybean foliage growth was severely limited and second cuttings of hay were shortened. Flue-cured tobacco markets opened on August 11. September rainfall was also nearly 2 inches below usual, and most of that fell during the last week. Many non-irrigated peanut stands contained dead vines at the end of September. Some Southern Piedmont, southeastern and Tidewater soybeans were cut for hay or grazed due to improper bean development. Although October precipitation totaled almost an inch above average, almost half of the rain occurred during the last week. Although the moisture came too late to help corn and soybeans in eastern areas, a limited acreage of southeastern peanuts gained additional poundage. Small grains germinated rapidly and pastures greened. Soybean growers delayed combining because of high moisture levels until heavy frosts helped dry the crop near the end of October. Weekly rains in November hampered soybean combining, but aided small grain growth. An ice storm knocked down a few northern soybeans. Flue-cured tobacco warehouses held last sales on the 13th, while burley markets opened the 24th. Indian summer arrived in early December, but this was short-lived as freezing temperatures returned by mid-month. Fire-cured and sun-cured tobacco markets opened the 2nd and 9th, respectively.

1980 LIVESTOCK SUMMARY

ALL LIVESTOCK: Virginia farmers received a record high $404.9 million for marketing cattle, calves, hogs, sheep, and lambs in 1980, up 35 percent from 1979 when the previous record of $299.3 million,was established. The live weight price farmers received for each species was lower in 1980 but the value of Virginia's livestock inventory on January 1, 1981 rose by five percent from a year earlier to $901.7 million.

CATTLE: Virginia cattlemen had 1.8 million cattle and calves on farms on January 1, 1981, up 3 percent from the previous year. All cows (including heifers that have calved) accounted for 850,000 head, also up 3 percent. Beef cows numbered 677,000 head, 80 percent of all cows. Dairy cow numbers increased 2 percent to 173,000 head. Although the 1980 calf crop was up 11 percent, the number of cattle and calves on feed January 1 was 36 percent fewer than a year earlier.

Virginia again ranked 25th in inventory of cattle and calves and Texas retained the number one spot with 12 percent of the nation's cattle. The number of cattle and dairy farms in Virginia remained unchanged at 39,000 and 9,500, respectively, for 1980.

The total value of cattle and calves on Virginia farms on January 1 was $837 million, up 4 percent from the previous January 1. The average value per head increased $5 to $460. Marketings increased by 48 percent and cash receipts from sales were 39 percent greater than 1979 at $299 million.

HOGS: Virginia hog farmers held an inventory of 750,000 head as of December 1, 1980, down 12 percent from a year earlier. Breeding hogs accounted for 113,000 head, down 2 percent. The number of market hogs on hand was 13 percent lower. Virginia's pig crop for 1980 was 1.2 million head, up 13 percent from a year earlier. The spring crop (December 1979-May 1980) was 644,000 pigs, 28 percent higher while the fall crop (JuneNovember 1980) was virtually unchanged from a year earlier at 587,000 head. Farms with hogs totaled 23,500 during 1980.

The total value of all Virginia hogs and pigs as of December 1 was $53.6 million, up 17 percent from last year easily surpassing the old record of $48.8 million set in 1975. The average value per head on hand December 1 was $71.50, 32 percent over last year but still well below the record high of $74.00 on December 1, 1975. Marketings for 1980 were 1.2 million head, up 34 percent from 1979. Cash receipts from hogs sold totaled $99.3 million, 30 percent higher than 1979.

SHEEP: Old Dominion sheepmen held 160,000 head of sheep and lambs on farms January 1, 1981, unchanged from last year. Ewes one year old and older, at 123,000 head, were 1,000 head above last year.

There were 159,000 lambs saved in 1980, down 3,000 head from 1979. Lambs saved per 100 ewes one year old and older on farms January 1, 1980 averaged 130, and ties Virginia for the second highest ratio in the Nation.

Total value of all sheep and lambs on farms January 1, 1981 was $11.1 million, 10 percent above the previous year. The average value per head increased $6.50 to $69.50, the highest value on record. Cash receipts from marketings during 1980 were 8 percent lower than 1979 at $6.6 million.

1/ Revisions for 1975-80 based on a review of survey data, the 1974 and 1978 Census of Agriculture, and other data made available since the original estimate was made. *Estimate not published if less than 200 head. -----No sheep and lambs indicated.

1980 DAIRY SUMMARY

Milk cows in Virginia produced an average of 11,622 pounds of milk in 1980, the largest yearly average per cow on record. Production has been regularly increasing since 1933 when Virginia's cows averaged only 3,300 pounds. The largest monthly production per cow was registered in May at 1,030 pounds. Production per cow was above last year for all months except July. Higher production per cow and increased cow numbers produced the highest State total in over 20 years of nearly 2 billion pounds, 3 percent above 1979. Besides having the highest production per cow May also had the highest total production of any month, 176 million pounds. The average number of milk cows on farms during the year was 172,000 and ranged from 170,000 in March to 173,000 in August through December. Milk production came from 9,500 farms during the year, unchanged from 1979. Dairy farms made up 16 percent of all farms in the State during 1980.

Cash receipts from the marketings of milk and cream produced in Virginia were nearly 265 million, 12 percent above 1979. Milk production is the second leading single source of cash income making up 18 percent of all cash receipts in 1980. The milk-feed price ratio compares milk prices and feed costs. The ratio uses current prices and shows the pounds of 16 percent concentrate ration that could be purchased with a pound of milk. The higher the ratio, the more favorable the feed purchasing power of milk. The average ratio for 1980, at 1.41, was .06 below 1979. The ratio started at 1.44 in January, increased to 1.50 in March, dropped to 1.33 in September, and then fluctuated before settling at 1.33 in December.

Utilization of the 1980 production falls into three categories:

1. fluid grade, including milk sold directly to consumers of which accounted for 92 percent of production
2. manufacturing grade, which was 7 percent of the total, was used to make various dairy products, and
3. used on farms which was only 1 percent of all milk.

Deliveries of Grade A milk totaled 1.8 billion pounds, 4 percent above 1979, and deliveries of manufacturing grade totaled 128 million pounds, up 5 million pounds or nearly 4 percent. Prices received by producers in 1980 were again record highs of $13.40 per cwt. for Grade A and $11.60 per cwt. for manufacturing grade milk. Converting the Grade A price to gallons, the dairy farmer received $1.15 a gallon.

Curd and creamed cottage cheese production increased from 1979. Curd production rose for the third consecutive year to 7.3 million pounds, 21 percent above 1979. Curd is primarily used in the production of creamed and low-fat cottage cheese. Creamed cottage cheese rose for the fourth consecutive year to a production of 9.5 million pounds, more than 30 percent above 1979.

Ice cream production increased to 8.8 million gallons, over 12 percent above 1979. This production was composed of 96 percent hard serve and 4 percent soft serve. Virginia processors made 5 million gallons of mix, an increase of 11 percent from 1979.

Ice milk production, which includes hard and soft serve and freezer-made milk shake, totaled 4.0 million gallons in 1980, a 10 percent decrease. Mix production, at 5.9 million gallons, was 1 percent below 1979.

Milk sherbert production for 1979 will not be published to avoid disclosure of individual data. The 1980 production was 468,000 gallons and mix was 297,000 gallons.

1980 POULTRY AND HONEY SUMMARY

POULTRY: Gross income in Virginia from the production of poultry in the marketing year ended December 1, 1980 totaled $262.4 million compared with $236.7 million in 1979. Of the 1980 gross income 52 percent came from broilers, 26 percent from turkeys, 21 percent from eggs, and 1 percent from other chickens.

Live weight production of broiler meat in 1980 totaled 531 million pounds, 11 percent above 1979. Egg production in 1980 totaled 913 million eggs, down 3 percent from 1979. Turkeys raised in 1980 totaled 10.1 million, 10 percent above 1979.

Chickens (excluding broilers) produced in 1980 totaled 3.4 million, down 9 percent from 1979.

Hatcheries (broiler chicks include West Virginia hatchery) produced 153.9 million broiler chicks and 6.5 million egg type chicks during 1980. Turkey poults hatched during 1980 numbered 7.5 million heavy breeds and 3.4 million light breeds.

HONEY: Virginia's 77,000 bee colonies produced nearly 1.5 million pounds of honey in 1980. Yield per colony averaged 19 pounds. The average price per pound received by producers was 96.4 cents.

CHICKENS: December 1, Number on Hand and Value, Virginia, 1976-1980

1980 VEGETABLE SUMMARY

The value of commercial vegetables produced in 1980 was slightly below that produced the previous year. In 1980, receipts totaled $23.4 million compared with $24.2 million in 1979. Fresh market vegetables showed an increase in the value of production over the previous year's level while the value of processing vegetables declined. The total value of fresh market vegetables rose from $17.6 million in 1979 to $19.6 million in 1980; an increase of 12 percent. Processing vegetables declined to $3.8 million in 1980 from $6.6 million in 1979, a decrease of 42 percent. Fresh market vegetables accounted for 84 percent of the total value of Virginia's major vegetables while the processing segment accounted for the remaining 16 percent.

Tomatoes occupied first place in the 1980 ranking by value of production of individual vegetables. Tomato production was valued at $6.7 million. The average price was above the previous year's level for fresh market tomatoes but fresh market production decreased. Fresh market tomatoes, which accounted for 80 percent of the total value of tomatoes, decreased in value from $5.8 million in 1979 to $5.4 million in 1980. Processing tomatoes decreased in value from $3.0 million in 1979 to $1.3 million in 1980.

Cucumbers continued to rank second in value of production of Virginia vegetables, despite a reduction in value from $5.1 million in 1979 to $5.0 million in 1980. This decrease in total value of cucumbers resulted from decreases in yield for both fresh market and processing segments that more than offset acreage increases. The average price for fresh market cucumbers was down but pickles increased in price. Value of production for cabbage, which was in third place behind tomatoes and cucumbers, totaled $4.0 million, an increase of 110 percent from value of $1.9 million in 1979.

Harvested acreage for commercial vegetables in 1980 totaled 25,070 acres, down 12 percent from the 1979 figure of 28,510 acres. Cucumbers and cabbage for fresh market showed an increase in harvested acres from the previous year; summer snap bean acreage was unchanged but fall snap beans, sweet corn and tomatoes declined in harvested acres. In the processing segment, pickle harvested acreage increased but harvested acreage declined for all other crops.

Production for both fresh market and processing vegetables in 1980 totaled 1.9 million hundredweight, down 30 percent from 1979. Total production in 1980 was down 9 percent from 1979 for the fresh market segment while production for the processing segment was down 51 percent.

VEGETABLES: Usual Planting and Harvesting Dates and Principal Producing Counties or Areas, Virginia

Crop	Seasonal Group	Usual Planting Dates	Usual Harvesting Dates Begins	Most Active	Ends	Principal Producing Counties or Areas (see map back inside cover)

1/ The following crops, mostly for processing, were grouped to prevent the disclosure of individual operations: Asparagus, Green Peas, Sweet Corn, Spinach, and Cabbage for Kraut.

1980 FRUIT SUMMARY

The 1980 apple crop was 11 percent smaller than the 1979 crop while the peach crop in 1980 was equal to the crop of 1979.

Apple production in commercial orchards in 1980 totaled 420 million pounds (10 million forty-two pound equivalents). Value of utilized production was $32.8 million, 18 percent below 1979. Virginia ranked sixth in the U. S. in apple production in 1980. The five leading varieties accounted for 91 percent of Virginia apples. Nationally, Virginia ranked second in York Imperial and Stayman production; fifth in Golden Delicious; sixth in Delicious and eighth in Rome Beauty production.

Peach production in 1980 totaled 32 million pounds (667,000 forty-eight pound equivalents). Total value of the 1980 crop at 5 million compared with the value of $4.2 million in 1979.

*In 1977 trees 1-6 years of age and trees 7 years old and older as a percent of total trees.

FARM INCOME AND PRODUCTION EXPENSES

Virginia farmers received nearly $1.5 billion for farm products in 1980, 8 percent more than the almost $1.4 billion received in 1979. Increased receipts for livestock and products more than offset lower receipts from 1980's drought-reduced crop harvest. Measuring year-to-year gains in terms of absolute dollars can be misleading, particularly if there has been a long-time inflation factor present.

Cash receipts from livestock and livestock products were 20 percent higher than 1979--an estimated $.9 billion in 1980 compared with $.8 billion a year earlier. Increased marketings of meat animals accounted for much of the higher receipts although moderate gains were also registered for milk and cream and poultry and eggs. Higher marketings for cattle and calves (up 55 percent) and hogs (up 42 percent) were the major contributors to the increased receipts, even though prices were lower. Both production and price were up for commercial broilers while higher egg prices more than offset lower sales. A modest increase in milk production was also accompanied by higher prices. Sales of livestock and livestock products accounted for 65.1 percent of total cash receipts in 1980 compared with 58.6 percent in 1979.

Cash receipts from crops in 1980 totaled $.5 billion down 9 percent from the nearly $.6 billion received in 1979. Drought reduced the production of most crops but the largest contributor to the lower receipts were field crops where receipts for corn, soybeans and peanuts were down 25, 20 and 43 percent, respectively, from 1979. One of the few bright spots was a substantial increase in wheat production accounting for an 83 percent increase in cash receipts. Tobacco receipts were virtually the same as 1979's blue mold affected crop.

On a commodity ranking basis, cattle and calves replaced milk and cream as the number one source of cash receipts for the first time since 1973. The 1980 total of almost $300 million for cattle and calves was up 39 percent and accounted for 20 percent of the total cash receipts from marketings. Milk and cream receipts amounted to about $265 million, up 12 percent from a year earlier and 18 percent of the total. Tobacco totaled just under $159 million and accounted for 11 percent of the total; broilers, $138 million (9 percent of the total); hogs, $99.3 million (7 percent of the total); soybeans, $71.3 million (5 percent of the total); turkeys, $67.7 million (5 percent of the total); apples, $57.5 million (4 percent of the total); eggs, $53.4 million (4 percent of the total); corn, $41.3 million (3 percent of the total); wheat, $32.1 million (2 percent of the total); and peanuts, $29.6 million (2 percent of the total). For more details, see table on page 2.

Gross income from farming again established a new record high, just under $1.8 billion. This is 9 percent above the previous record set in 1979. The average gross income per farm, at $30,384, compares with 1979's $27,510. Total net farm income after inventory adjustment totaled nearly $218 million, 39 percent below the record high set last year. Net income per farm averaged $3,750, well below the record high $6,069 established a year earlier. The ratio of net income per farm to gross income per farm was 12.3 percent in 1980 substantially less than the 1970-79 average of 22.1 percent.

Farm production expenses totaled an estimated $1.5 million in 1980, 11 percent higher than the 1979 total. The 1980 total is 28 percent above 1978 expenses. As was the case last year, all major current operating expenses increased with the exception of net rent to non-operator landlords.

Farm production expenses, which rose 11 percent, exceeded cash receipts for the third time in the last four years. The ratio of production expenses to gross farm income was 86.5 percent compared with the 85.0 percent registered in 1979. Since 1970 the 1980 ratio is second only to the 1977 average of 88.5 percent. The average for 1970-79 is 78.8 percent.

1980 AGRICULTURAL LABOR

Quarterly estimates of Agricultural Labor are based on multiple frame enumerative probability surveys. Two sampling frames are utilized -- a list frame and an area frame. In combination they complement each other for sample efficiency. The list frame is assembled from various sources and consists of employers of agricultural labor. A random stratified sample is selected from this list for each of the quarterly surveys. Employers expected to have large numbers of workers are sampled more heavily than those with fewer workers. The area sampling frame is an exhaustive listing of small partitioned units of land which can be sampled. This frame is used primarily to estimate for the imcompleteness in the list. The same survey method is used extensively by the Virginia Crop Reporting Service in a variety of estimating programs. It has proved to be a most efficient method of compiling reliable agricultural statistics.

The agricultural labor tables show estimates of farm employment and wage rates by quarters based on the Quarterly Agricultural Labor Survey. The data relates to the week containing the twelfth day of the quarterly month. Hourly rates are shown for methods of pay and types of work performed so that data users will have comparative information.

LABOR: Farm Employment and Wage Rates, Virginia, January and April 1981

ITEM	January 11-17 1981	April 12-18 1981
	-Thousands-	
Farm Employment:

1980 CUSTOM WORK RATES ON VIRGINIA FARMS

By William L. Brant, Extension Specialist, Farm Management
Virginia Polytechnic Institute and State University

The purpose of this publication is to report the prevailing custom work rates on Virginia farms for the 1980 crop season.

The rates quoted were collected by a survey of farm operators and extension agents in Virginia during the winter of 1980-81. Each respondent to the survey was to quote rates only for those operations with which he was familiar. Thus, some respondents quoted rates only for one or two operations while others quoted rates for many operations. Exchange work between farmers was not to be considered by respondents as custom work.

The responses to the survey were edited to remove those replies for which the respondent's interpretation was obviously in error.

Custom work rates are defined to include the cost of hiring a machine, its fuel, an operator, and any other inputs directly associated with the machine. The custom work rates do not include the cost of seed, fertilizer, and other material unless otherwise specified. Application of lime and land plaster are the only two custom operations for which the cost of the material is included in the rates quoted.

INTERPRETATION OF THE CUSTOM RATE TABLES: The quoted custom work rates should provide the user with some insight into the charges made during 1980 for a given operation in a given area of Virginia; however, the rates must be interpreted with care for the following reasons. Due to the cost of personal surveys, questionable or doubtful responses could not be verified. In many cases, the number of responses to a particular custom work rate was insufficient to provide a basis for statistical tests of significant differences between these rates. In addition, input costs and price changes may well alter the prevailing custom work rates for 1981 and subsequent years.

Custom work rates will vary by areas of the State. These differences are caused by variations in field size, soil characteristics, steepness of slopes, and availability of machines. For each rate quoted, the number of observations is shown as well as the average, lowest, and highest rate.

Custom work rates are quoted for different operations by areas of Virginia. The "West" area includes State Planning Districts 1 through 7. The "Central" area includes Planning Districts 8 through 14 and District 16. Planning Districts 15 and 17 through 22 make up the "East" area.

These crops are included as assets.

CONSUMER PRICE INDEX: Commodity Groups and Selected Items, United States, 1930-1980

NOTE: 1967=100. Prior to 1965, excludes Alaska and Hawaii. Beginning 1965, index structure revised to reflect buying patterns of urban wage earners and clerical workers in the 1960's, including single workers living alone as well as families of two or more persons; indices for prior years apply only to families of two or more persons. See HISTORICAL STATISTICS, COLONIAL TIMES TO 1957, Series E 113-139, for indices on 1947-1949 base. Beginning in 1978, index revised to reflect buying patterns of all urban consumers. Changes in definitions for some items may cause incomparability of indices for 1978 and later years with prior indices listed.

COLLECTING INFORMATION FOR AGRICULTURAL STATISTICS

The Virginia Crop Reporting Service serves farmers and the agricultural industry by preparing estimates of crops, livestock, poultry, dairy, agricultural labor, prices and other agricultural related topics. "Virginia Agricultural Statistics" presents an accumulation of these estimates as well as agricultural information from other sources.

The major sources of the data which are used for the crops and livestock estimates are farmers, county agents, hatcherymen, managers of slaughterhouses and grain elevators, seed and feed dealers, buyers, shellers, processors, gins, merchants, machinery dealers and others--the same people who are extensive users of the information. Data are collected by any of several methods; personal interviews, mail inquiries, telephone interviews, and/or field observations.

Mail surveys are widely used for collecting information on an array of agricultural activities; planting and harvesting intentions, planted and harvested acreage, yields and production, livestock and poultry inventories, breeding intentions, prices paid and received, and many others. The mail survey as the exclusive data collection technique was particularly suited to the time when there were more than twice as many farms as now with most of the farms being similar. The mail survey continues to be an important method of gathering information. The low cost of data collection by mail is one of its principal advantages. Many reporters have participated in mail surveys throughout their entire careers in agriculture, and some families have been reporting through more than one generation.

In the early 1950's, Statistical Reporting Service (SRS), set up a research staff to develop and improve statistical techniques. A long range program recommended probability sampling for enumerative surveys and objective measurements of crop yields. The program was initiated on a pilot basis in 10 states in 1954 and gradually expanded to fully operational in the 48 contiguous states in 1967.

Statistical theory provides a basis for selecting samples so that the chance, or probability, of each farm or farmer being in the sample can be computed. This offers two definite advantages:

1. Probability sampling provides information for computing sampling errors. Thus, estimates can be made with a known degree of precision.
2. Since the probability sample represents a true cross section of U.S. farms, the estimates are not biased as they may be when the sample is not representative.

These methods are supplemented by the mail survey. The combined data are used for estimating crop acreages and production, yields, and livestock inventories.

JUNE ENUMERATIVE SURVEY: Each year during the last week of May and the first week of June, a group of trained enumerators representing the Crop Reporting Service visit a set of selected land areas or segments which are scattered throughout Virginia. Initially all the land in the State was stratified or broken into categories based on its use. The four broad areas were:

1. Intensively cultivated areas.
2. Extensive agricultural areas used primarily for livestock.
3. Highly developed land such as cities and industrial areas.
4. Nonagricultural land such as parks and forests.

After the stratification, land areas representative of the State were randomly drawn off to be used as segments. There are now 343 segments in Virginia, averaging about 400 acres each. The segment areas are delineated on aerial photographs, and each person who operates land in any segment is interviewed to determine the land's use. Although the chief interest is in the crops grown and livestock kept on the land, all uses of the land in a segment are accounted for. Expansions of the collected data give indications of the crop and livestock totals in Virginia. These indications are used in conjunction with indications from mail surveys which are conducted at the same time. Using both types of indicators results in improved accuracy in the various estimates. Approximately 20 percent of the segments are replaced each year by new segments so as to reduce respondent burden.

DECEMBER ENUMERATIVE SURVEY: Around December 1, about 400 farms, which were contacted in June, are visited again to provide data on livestock numbers and acres sown to winter wheat and rye. As in the previous surveys, mail survey indications are combined with expanded data from the December survey, resulting in a basis for our estimates of the December 1 hog and pig inventory, the fall pig crop, intentions for spring farrowings, year-end inventories of cattle and chickens, and winter wheat and rye plantings.

LARGE LIVESTOCK OPERATORS: A change in inventories of one, or a very few, large livestock operations can have a tremendous effect on total numbers of a specie in Virginia. Therefore, a list of farms with a minimum of at least one of the following is maintained: 75 cattle of any type, 75 hogs, and/or 400 chickens. A survey method called multiple-frame sampling is used to make most livestock estimates. This method involves the supplementing of the enumerated area segments (area frame) with a random sample of a list (list frame) of large operators (surveyed by mail or telephone). This combined survey method results in greater accuracy of livestock numbers at a lower cost.

COOPERATION: All surveys depend heavily on the cooperation of those contacted, and this is especially true in the multiple-frame survey method mentioned above. Better participation in answering questionnaires about crop acreages and production, livestock numbers, and other farm related items, results in more accurate data upon which to base estimates. The Virginia Crop Reporting Service sincerely thanks all who have participated in the various agricultural surveys.

1981 CALENDAR OF STATISTICAL AND ECONOMIC REPORTS

Released by the Economics, Statistics, and Cooperatives Service
United States Department of Agriculture

The USDA's Statistical Reporting Service prepares estimates of crops, livestock, poultry, dairy, prices, and related agricultural topics. The reports are released by the Crop Reporting Board during the specified months shown in the following tables. Local segments of most reports are released through State offices.

The USDA's Economic Research Service issues periodic reports that analyze the economic situation of United States agriculture. These reports are also released during months shown in the table below.

For information on detailed contents of the reports, write to the Virginia Crop Reporting Service, P.O. Box 1659, Richmond, Virginia 23213. The release date schedules for 1982 will be available by request in December 1981.

1981 CALENDAR OF SITUATION REPORTS AND SUPPLY-DEMAND ESTIMATES REPORTS

Summaries will be released by the ERS Information Staff,
USDA, on dates shown

FARMERS' 900

NEWSLINE

900-976-0404

Call the FARMERS'–900–NEWSLINE for the latest U.S. and world crop, livestock, export, and economic news from USDA. A 60-second summary is available to you 7 days a week 24 hours a day. Your cost is 50 cents per call. Items are put on the FARMERS'–900–NEWSLINE at 4 p.m., Washington, D.C., time on the date indicated. If you call before 4 p.m., you will hear the preceding day's report.

The FARMERS'–900–NEWSLINE, in cooperation with the Bell System, keeps you on top of the latest agricultural estimates and analysis from USDA.

In some areas it is necessary to dial 1-900-976-0404. Features are subject to change. Send comments to:
